2015 POPULATION AND HOUSING CENSUS

Volume 1: Management Report
and Basic Tables

National Statistics Office
Ministry of Finance
Bairiki, Tarawa.

September 2016

Foreword and Words of Acknowledgment

The 2015 population census is the 13th population census in Kiribati since the first census in 1931 and many people and organizations have been involved in the planning and preparatory activities—during the actual census enumeration phase, and in the subsequent coding and data entry phase leading up to the write-up and completion of this report—and I want to thank all of them. I wish however to name some that I think deserve mentioning because of their “greater involvement” such as the census advisory committee, UNFPA, SPC, and DFAT. Although the census advisory committee is supposed to be an administrative or management body overseeing and monitoring the progress of the census project, some of the members in fact did provide technical assistance as well. For instance, Wayne Reiher (MFED IT manager), with the assistance of Dr Iete Rouatu, designed the CSPRO data entry program and set up the computers for the census data entry operators—but Mr Reiher left the census project halfway through the project when he got appointed to the IT Manager post within the Ministry of Communication. Oritite Raimon (current MFED IT manager) continued from Mr Reiher and provided the IT support to the census management team until the project came to an end. Tawaria Komwenga, chairman of the committee, was instrumental in moving the census forward with his administrative skill and administrative connections but he had to leave before the census came to a conclusion to attend an attachment program in the US in early 2016, and Ms Danietta Apisai took over the role as chairperson of the census advisory committee. Ms Apisai did an excellent job in ensuring that the census management team work according to the agreed census plan and timetable. Teewa Tonaeka from the Ministry of Internal Affairs was the key person in mobilizing and coordinating the support of the island councils and became the main official link between the census management team and the island councils. I wish also to thank Dr Rouatu, the census technical advisor, for guiding and supporting the population census project right from its start up to the completion of the project—he also assisted me in drafting this report. Tiaotin Enari, from the Lands Division, was not a committee member but he was asked to assist in the household listing given his experience in using GPS and GPS related programs and I want to extend our gratitude to him. Although there were problems encountered in the household listing exercise, when the GPS equipment were used, he nevertheless performed his job energetically and satisfactorily. I extend also words of thanks to Neeti Komeri who supervised the census operation in the Line islands, and to Kairoronga who kindly agreed to enumerate people on Kanton island. Nei Ruria Abere was our first accountant but had to leave after getting another job elsewhere and Teariba Riurate took over until the end of the project. I do not forget also my work colleagues Aritita Tekaeti¹, Agnether Lemuelu, and Teimaro Boutu, with whom I shared the moments of ups and downs while the census project moved from phase to phase until the completion of the census project. We enjoyed times when we have successfully completed a census task or phase or when we have presented a successful progress report, but we did also feel very bad when something significant went wrong, such as when the household listing using GPS was not producing the expected results, or when all students from one boarding school left their school without being

¹ The Ag Republican Statistician, and former census commissioner for the 2000 census.

counted², or when we found out that on one island the population has significantly increased due to some national convention or meeting, or when our presentation to the census committee got mixed up. And to all census staff—supervisors and enumerators—permanent and temporary—I thank you all—without your cooperation and participation the 2015 population census for Kiribati would not have come to a successful completion. Last but not least, I want to thank our Kiribati government for having faith in our ability to carry out a successful census despite the lack of overseas TAs right from the inception stage to the completion of the census project. I sincerely hope that the results from this census meet the needs and the expectations of our government, and other interested users.

Kam rabwa

Orebwa Morate
Census Commissioner

² The names of these students and their particulars were subsequently taken from the school headquarter.

1. Introduction

This is the first report on the 2015 population census and contains the description of the census organization and management, main activities undertaken, as well the basic tables considered useful for planning and policy formulation purposes. It is useful however to stress here that more information can be “teased out” or provided from the population census data file but people requesting such information should contact and ask the National Statistics Office (NSO) for such information.

Traditionally after the management and basic tabulations report has been published, a demographic report would come out, usually written by SPC—but this can be done by other agencies including universities as well. In addition to the demographic report, other reports can be produced as well but this depends on the availability of funds and consultants to do the analysis. For instance, a labour force survey report has been produced based on the 2010 population census, in addition to the demographic analysis report.

Conducting a population census in Kiribati has unique challenges that require creativity or ingenuity on the part of the census management team. For example, Kiribati is made up of small islands that are widely dispersed and reaching some of these islands is difficult because there are no airfields (Banaba, Teraina and Tabuaeran)³, or the shipping passage is too rough (Tabuaeran and some southern islands), or it may be that there is simply no regular transport to the islands (e.g. Banaba, Teraina, Tabuaeran, and Kanton). And on some islands, there are people living on islets far away from the main island and reaching these islets require motor boats, and raincoats in case there is rain, or a life vest in case the boat capsized. To enumerate people on Kiritimati island (or Christmas island) one needs to fly and stay overnight in Fiji before flying to Kiritimati island. And to enumerate people on Tabuaeran or Teraina one has to wait on Kiritimati island for a boat sailing in that direction—and then wait for a boat to sail back to Kiritimati island. This may take weeks if not months. At the time of the enumeration there was no regular shipping service from Kiritimati to Tabuaeran or Teraina. Telecommunication (e.g. telephone, internet, radios, wireless, etc.) is also very poor in the country and managing and coordinating the census activities on the outer islands from the main census office on S Tarawa is indeed a formidable challenge. Although the telephone service to outer islands has been established there is only one or two telephone booths on the islands and usually the signal is very poor. The number of computers on the outer islands is also very limited therefore it is difficult to communicate via the internet. And unlike more developed countries, houses have no numbers or unique identifiers or addresses and therefore the household listing exercise is often a challenge. Even getting the funds in the first place is difficult because the Kiribati government often rely on overseas donors to provide funding to the census—and sometimes “willing” donors have their own preferences with regard to the management and conduct of the population census—which may differ to what local staff have in mind. In summary there are so many constraints and challenges that the census management team has to face when planning and conducting a population census and this is why it is very important that there is a census management report explaining in detail how the census management team had tackled or addressed the problems or issues faced. The idea is that the next census management team, in particular the census commissioner and his/her census advisory committee, will read the report and based on what worked and what did not, be able to formulate and plan their next population census in a more efficient and more cost-effective manner. A classic example is the problem noted in this census when the GPS equipment was incorporated as part of the household listing exercise, and staff (including senior staff), as it turned out, did not know exactly what to do with these equipment in the context of the census household listing, and in the subsequent enumeration. Had there been a

³ By the time this report is completed, Air Kiribati has resumed flights to Tabuaeran and Teraina.

documentation explaining in detail how the GPS was used in the previous census this could have been used to guide the 2015 census management team and avoid the confusion that arose after the household listing was made. Anyway the census management team quickly improvised and went back to the traditional way of carrying out the household listing and EA demarcation, i.e. not using the GPS equipment. This report starts off with background information, census organization and management, census budget analysis, census activities, basic tables on people and finally tables on household assets and activities. This report also discusses problems or issues faced during the preparation activities and during the actual census field work. These are documented in order to help future census management staff do a better job—at least not to fall in the same dilemma or trap as experienced or noted in this population census.

2. Background information

The population census of 2015, unlike the previous censuses, started off quite late because of staffing and funding constraint. In February 2015, less than a year before the census enumeration date, the Minister of Finance⁴ asked Dr Iete Rouatu, a retired civil servant and former Census Commissioner of the 1990 population census, to supervise the 2015 census but Dr Rouatu was already tied up with another consultancy work with the Accounts Division and kindly declined, but he agreed to be the Census Advisor. Ms Aritita Tekaieti was then asked to supervise the census, on top of her current job as the Acting Republican Statistician, but after a while it was decided that she should resign as the Census Commissioner and concentrate on looking after the National Statistics Office (NSO) while another person looks after the population census project. The Minister, after consultation with the Permanent Secretary, then appointed Orebwa Morate, a senior staff who joined the NSO in November 2013, to be the 2015 population Census Commissioner—she was sworn in as the Census Commissioner on the 5th March 2015—less than 10 months before the census enumeration.

By the time Ms Morate took over, some census preparatory works, such as the household listing and the enumeration area demarcation, have been completed⁵—under the supervision of Tekena Tiroa⁶, assisted by Aritita Tekaieti, Teimaro Boutu, and Tiaotin Enari. Unfortunately, as it turned out, the household listing was not properly conducted, at least in some areas, such as Temaiuku and some parts of South Tarawa. The GPS equipment was used in the household listing and in the EA demarcation exercise but as it turned out those supervising the exercise were not quite sure of how to use and incorporate the GPS readings into a proper household listing and area demarcation exercise. Furthermore, there were no stickers or labels put on the houses on all the islands including S Tarawa, as was done in the past censuses, and therefore it was not possible to identify the houses even though there was a list of households collected and kept at the census office. That is, the list had the names of the heads of households or who owned the houses but on the ground or in the field nobody knows the owner of the house because the house or household has no identification. The only way the households can be identified and matched with the household listing is to take the GPS readings again and cross-referencing these with the coordinates of the houses already recorded during the initial household listing exercise—but this could not be done during the actual enumeration because of the time involved—besides, there was not enough GPS equipment for each enumerator. The area demarcation was not done properly as well. This is a significant drawback to the 2015 population census but remedial actions were quickly planned and executed. For instance, enumerators were instructed to place a sticker on each house after they have interviewed that house or household. The sticker has a number that corresponds to the household number in their questionnaire, and this allowed enumerators or supervisors to return to the same house in case a second visit was warranted—during the census enumeration or even after the census. And another household listing was quickly organized on S Tarawa to correct the EA boundaries because some EAs have less than 30 households while some have more than 100 households. An average of sixty households was assigned to each EA however the number maybe be more or less depending on the boundary lines.

In terms of funding, the first funding came from the Kiribati government in Oct 2014 with a total of \$100,000 out of which \$70,000 was used up during the first household listing exercise carried out towards the end of 2014. The initial budget for the whole census was \$990,000 but it was revised by SPC to \$1.2

⁴ Tom Murdoch was the honorable Minister.

⁵ This was before the census advisory committee was set up, and before Dr Iete Rouatu was appointed as the Census Advisor.

⁶ Former Acting Republic Statistician. He retired in March 2015.

million. However Cabinet agreed to the initial budget but not to the SPC revised figure. UNFPA agreed to provide \$340,000 for the awareness and publicity activities, census equipment, for the pilot census, staff training, and dissemination costs. However UNFPA cut back its funding when the census management team did not approve its proposal that included the recruitment of an overseas advisor and postponing the population census to the following year. It was explained to UNFPA that there is already a local advisor and that the government had decided that the census should go ahead as originally planned (i.e. November 2015)—exactly five years after the last census. The Kiribati government took on the remaining census bill.

After the Census Commissioner was appointed, staff from SPC visited the National Statistics and offered their assistance. They submitted a questionnaire to be used for the census which looks very much like the 2010 census questionnaire. In fact SPC was heavily involved in the 2010 population census however the outcome of that census was generally poor. For instance, some of the cross tabulations produce very odd information such as over hundred PhD holders in Kiribati, outer islands having PUB toilets despite the fact that PUB exists only on South Tarawa, etc. This is despite SPC “heavy editing” of the census data file to try to clear the wrong information or abnormal entries—and this is one main reason for the delay of the 2010 population census report. The census advisory committee did not accept the SPC questionnaire straightaway given the poor results mentioned but SPC insisted on its questionnaire, and after lobbying to senior government officials and some members of the census advisory committee, it was agreed that the SPC questionnaire would be tested in the pilot census.

The pilot census was carried out on South Tarawa and North Tarawa. The initial plan was to carry out the pilot test on Abaiang but because of bad weather and lack of regular transport, the pilot census was shifted to North Tarawa. The pilot census took place in June 2015 and went on for two days. The questionnaires were subsequently collected and checked at the national statistics office. There was an evaluation form completed by the Pilot Census Enumerators however it was very obvious from looking at the returned questionnaires that most were not completed and when enumerators were asked what were the problems most replied that the questionnaire was too long and complicated. Nobody, for instance, replied to the question on “**secondary activity**” as well as to the questions on **total income last year**, the **area of land used for farming**, etc. After reviewing the results the committee explained to SPC that some of their questions were inappropriate or irrelevant for a census, at least in the Kiribati context, but SPC insisted that they are “international” questions. Furthermore, SPC was also told that the design and layout of the questionnaires is too “complicated” but SPC maintained that the design is standard and have been applied to Palau. Anyway the pilot census results clearly showed and demonstrated that some questions are not appropriate in the context of Kiribati, and the layout of the questionnaire is too complicated with so many “**Go To**” options and very small space for responses/answers. Also the pre-coded answers on the questionnaire was not favoured by the census committee because the enumerators are expected to know the codes and to use them during their enumeration. The codes are difficult to remember and the enumerators are expected to look at the coding list every now and then during the enumeration—and this is time consuming. The pilot census enumerators said they spent so much time because of the excessive number of questions asked, the irrelevance of some, and the complexity of the questionnaire design. Some enumerators spent in their first visit, over 2 hours interviewing one household and some household members actually were getting bored and a bit annoyed of the length of time taken up by the interview and some actually interrupted the interview to attend to their household works first—and some said they need to lie down while they answer the questions because the interview took so long and their back were aching. Based on the pilot census results and the feedback from enumerators, a decision was made to abandon the SPC questionnaire and return to the traditional questionnaire which is relatively straightforward and easy to complete. SPC staff went over the pilot census results and took back with

them the evaluation forms. Apparently SPC was not completely satisfied and expressed their disappointment through emails sent to the Secretary of Finance, ministry of foreign affairs, and the Kiribati High Commissions, and possibly regional bodies around the Pacific. SPC did not only express its disappointment but also claimed the Kiribati census did not follow “international questions”, and standard census procedures. But the main reason why the Census Advisory Committee and the Management Team rejected SPC questionnaire is that it has been tested and there is overwhelming evidence that it is too long, too complicated, and asks irrelevant questions. Another reason for not relying entirely on SPC advice is that the results of the 2010 population census is generally poor compared to previous censuses—and SPC has been heavily involved in that census.

After the Census Management Team and the Advisory Committee rejected SPC questionnaire, UNPFA came up with a proposal of recruiting someone from overseas to act as the census advisor and to postpone the census to next year. Unfortunately the census enumeration date had been publicly announced and Cabinet has not given any advice to change the census date—besides, extensive preparations for the November 2015 census enumeration had been made. The Census Advisory Committee and the Census Management Team decided to go ahead with the census as originally planned, and on the 7 November 2015, the Census Enumeration started.

3. Census Management

The 2015 Population Census Commissioner, as explained above, is Ms Orebwa Morate, one of the senior staff of the National Statistics Office and she was appointed by the Minister of Finance, Honourable Tom Murdoch, on the 5th March 2015. Her two assistants are: Agnether Lemuelu and Ms Teimaro Boutu, both working in the NSO and know how to work with CSPRO and ACCESS database. Neeti Komeri was appointed in September 2015 as the Deputy Census Commissioner looking after the census in the Lines and Phoenix Group but in December the same year his contract ended and Agnether Lemuelu was appointed as the Deputy Census Commissioner responsible for data entry and data analysis. Ms Aritita Tekaieti, the current OIC, also assisted in the census preparations as well as Tiaotin Enari from the Lands Division. Tiaotin assisted in the household listing as well in drawing up enumeration area boundaries using GPS. Like the previous census, GPS is being used to plot the coordinates of the households as well as marking physical boundaries on the maps, however as explained above there was some problem with the household listing and the EA demarcation exercise and another household listing and EA demarcation was later undertaken without GPS equipment. There is also a population census advisory committee comprised of the following people:

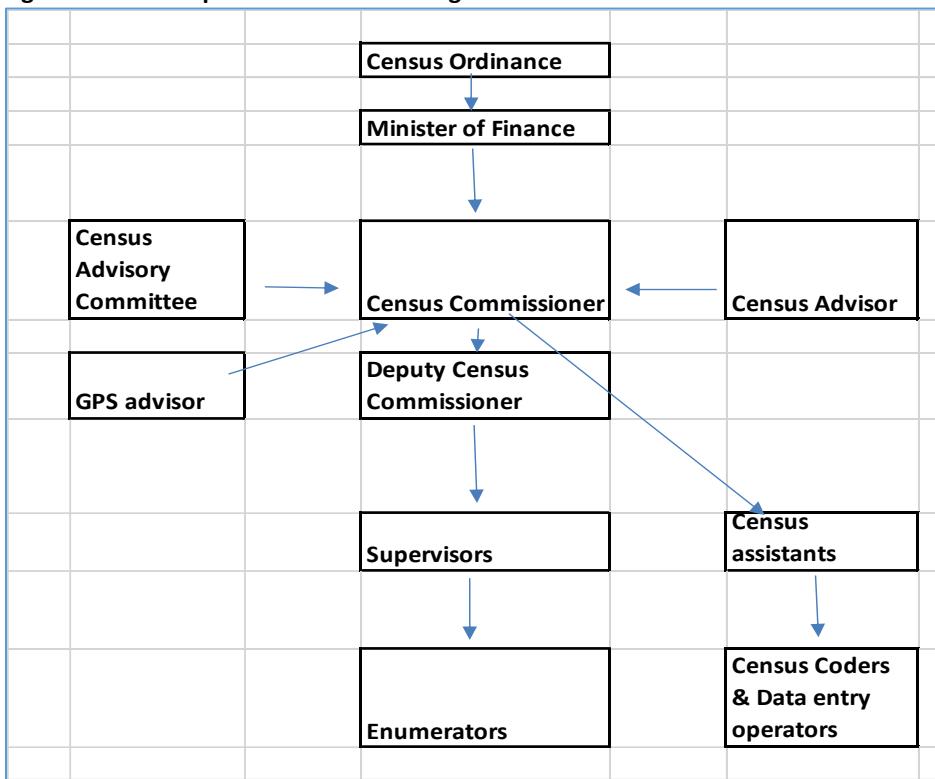

- Tawaria Komwenga (Deputy Secretary, and chairman)
- Teewa Tonaeka (Local Government Director, Ministry of Internal Affairs)
- Wayne Reiher (IT manager, MFED)
- Iete Rouatu (Private Consultant)

But Tawaria Komwenga and Wayne Reiher left the ministry of Finance before the project ended—and they were replaced by Danietta Apisai and Oritite Raimon, respectively. Iete Rouatu was appointed as a member by the Secretary of Finance but he was specifically asked by the Minister of Finance to be the Technical Advisor to the census project before the committee was formed.

The committee is a new addition to the population census project and its main role is to advise the Census Commissioner on important issues and to ensure the census proceeds according to the agreed timetable and within the budget allocated to the census project. The committee is also expected to provide a progress report and any required information on the census to the Minister of Finance or Cabinet whenever there is a need to do so. Fortunately all the committee members were in a good position to assist the census operation because of their respective roles in their own ministries and because they have specialized skill that the census needs, such as computing skill or practical census knowledge. For instance, the Deputy Secretary, who is also the chairman, often consulted the Permanent Secretary of Finance ministry for funding support and Mr Tonaeka from the Ministry of Internal Affairs is the main contact with clerks on the outer islands to assist in the recruitment of supervisors and enumerators and generally to enlist the support of the island councils. Mr Reiher and Dr Rouatu assisted in the computer programming and computer set-up. Dr Rouatu also advised on other technical issues related to the census operation such as the household listing, EA demarcation, questionnaire design, data processing, and so forth.

On Kiritimati island the population census was managed by Neeti Komeri and assisted by nine supervisors.

Fig 1. The 2015 Population Census Management Structure

4. Census budget

The 2015 Population Census total budget is \$999,383: UNFPA (\$343,798), DFAT (\$41,000) and the Kiribati Government (\$614,584). This is less than the budget of the 2010 population census of \$1.1 million (AusAID provided \$500,000, UNFPA \$300,000 and the Kiribati government \$300,000). In the 2015 census, AusAID (now DFAT) reduced its funding support to just \$41,000, and UNFPA maintained its support of about \$300,000 however as it turned out UNFPA only paid \$66,000 or only 20% of its share. This means the 2015 population census is severely under-budgeted but because the population census is a statutory obligation of the government the census activities proceeded despite the problems with the budget.

Table A. 2015 Population Census Budget

Activities	Total	Kiribati Govt	UNFPA	DFAT
Staff costs	\$366,959	\$366,959		
KPF Contribution	\$26,298	\$26,298		
Transport	\$14,167	\$14,167		
Publicity (Communication Strategy)	\$17,400		\$17,400	
Equipment and Stationary	\$179,484		\$179,484	
Census Committee Meetings	\$2,948	\$2,948		
Census Technical Committee Meeting (Workshop)	\$750	\$750		
Census training workshop	\$83,502		\$83,502	
Pilot census transport/travel	\$8,270		\$8,270	
Census Enumeration Cost	\$114,980	\$114,980		
Ship Charter	\$70,000	\$70,000		
Dissemination/Printing	\$55,142		\$55,142	
Household Listing Exercise	\$43,394	\$2,394		\$41,000
Contingency	\$16,088	\$16,088		
TOTAL	\$999,383	\$614,584	\$343,798	\$41,000

Although the population census project actual expenditures have not been reconciled the amount warranted and the amount spent are presented below to highlight the problems of funding faced by the census management team and the census advisory committee.

Table B. The 2015 Population Census Project Budget, Warrants, and Expenditures

Breakdown of Warrant against Budget			
	BUDGET	Amount Warranted	shortfall
Kiribati Governme	\$ 618,128.70	\$ 450,000.00	\$ 168,128.70
UNFPA	\$ 297,465.00	\$ 23,670.00	\$ 273,795.00
UNFPA-Inkind	\$ 42,789.00	\$ 42,789.00	\$ -
AUSAID	\$ 41,000.00	\$ 41,000.00	\$ -
Total	\$ 999,382.70	\$ 557,459.00	\$ 441,923.70
Statement up to July 2016			
Amount Warranted	Total Expenditure	Balance Available	
\$ 557,459.00	\$ 798,828.78	-\$ 241,369.78	

It is very clear from the table that the population census project total expenditure (at the time of writing this report) is \$798,828.78 which is still under the initial budget. However because UNFPA did not pay up its commitment of \$273,795 the census management had great difficulty in securing funds for some of

the census activities. However because the population census is a statutory obligation of the government the census project went ahead leaving the funding problem to the Ministry of Finance to sort out. Under the Census Act all the population census expenses should be charged to the Government Consolidated Fund.

5. Population Census Main Preparatory Activities

In this section each major phase of the census preparations will be discussed. Problems or issues faced will be described as well as remedial or corrective measures taken.

5.1 Census project formulation and funding

Usually before any project commences, the first thing is to draft up a project document and this is true in the case of a population census as well—and the reason is to secure funding. But while the intention is to secure funding the Kiribati Population Census Ordinance clearly states that “*all expenditures related to the conduct of the population census shall be charged to the Consolidated Fund*”. In brief, the cost of the population census shall be met by the Kiribati government. However the practice in the past, and which continues to this day, is to ask overseas donors for funding support. In the case of any shortfall, the Kiribati government is expected to meet this shortfall however as noted in the past, the Kiribati government is often slow in providing the required funds.

For the 2015 Census, the census project prodoc was submitted to the Kiribati government in 2014 and the total budget is \$999,383. SPC revised the budget to \$1.3 million but Cabinet approved the initial budget and the first funding from the government of \$100,000 was made in January 2015. For some reasons overseas donors were very slow in responding to the 2015 census funding request, and this is why Cabinet was “pressed” to provide, at least the first payment, at an early stage. Only UNFPA agreed to provide funds but its payment falls short of what it initially set aside for the 2015 Kiribati population census. Getting the rest of the budget from the Government was not easy and sometimes it looked like the census would be stopped but eventually funds were made available and the census project continued according to the census timetable. This is one of the main problems faced by the 2015 population management team and the advisory committee.

5.2 Household listing

When funds was released by government in January 2015, Tekena Tiroa, the Acting Republic Statistician that time, immediately started the household listing exercise—on South Tarawa and then on the outer islands. About twenty temporary staff were recruited to carry out the exercise. Unfortunately the exercise was carried out rather hastily and some of the enumeration areas were not clearly demarcated and several households were wrongly slotted in enumeration areas that were not meant for them. There was some misunderstanding also that enumeration areas will cover only villages (or places that people usually live in) when in fact EAs should cover all spaces on the islands, including ponds, causeways, uninhabited islets, long stretches of barren land, etc. Some of the EA boundaries are very unrealistic as well—they are very straight and cut through ponds and buildings when in fact boundaries should follow the curves of the roads, edges of the ponds, or other prominent physical features that can be easily identified and followed during the fieldwork. These mistakes were discussed and corrected in August and in September 2015, a few months before the actual census enumeration.

In the past censuses, a sticker (with a household number on it) was usually placed on the door (or prominent location) of every house during the household listing in order to identify the households during the demarcation and enumeration stage. This is done in Kiribati because there is no address of the houses or apartments—unlike houses or buildings in the more developed countries that have well defined boundaries and a permanent address. Unfortunately, as mentioned above, in this 2015 population census no stickers were placed on the houses but the name of the household head and the GPS position was

taken. The data on this is kept in an ACCESS database and in MAPINFO in the office. The absence of the stickers on the houses however means that it is very difficult to match the households on the list with the actual houses in the field. The number on the households (or on the sticker) is also a quick way of knowing how many houses within an EA. To address the problem it was decided that the enumerator would simply enumerate the houses within his/her EA and put a sticker on each house after the interview, and in this way it would be possible to return to any house if there is a need to do so. The other advantage of the sticker is that it is possible to tell which houses have been enumerated, and which have not. The Census Management Team with the census advisory committee went over the EAs again—to make sure the number of houses in each EA averages around sixty because some of the EAs had very low numbers and some very high numbers. The number of households within an EA is the load of work that one single enumerator has to do during the enumeration stage and the idea is to ensure this is not excessively high or excessively low.

5.3 Questionnaire design

Although the population census is a recurring or routine undertaking, and some may be forgiven to think that a standard questionnaire should have been used in all the censuses, for comparative and consistency purposes, the reality is that each time a census is to be undertaken, a substantial amount of time is needed to finalize the questionnaire. This is because a population census is a very large comprehensive data collection exercise, very expensive and resource demanding, and it is critical that the right information is obtained. Once the census count is completed then one has to wait for another five years or more to do another count again. Some questions however will remain the same in most censuses, such as the name, the sex, the age, the marital status, the religion, residential place, etc. These are the core questions in a population census, and the rest are subsidiary in the sense that they can be obtained elsewhere. For instance, education information can be obtained from schools or from the ministry of education, while fertility (births) and mortality (deaths) can be obtained from the ministry of health and from the civil registration office. Information on occupations, industries, etc. can be obtained from the ministry of Labour, KPF, PSO, and from labour force surveys. In countries where information or data are hard to get, such as Kiribati, the population census has been used as the main vehicle for obtaining such information. But the main purpose of a population census is meant to capture the population of a country, its structure, and distribution at single point in time (often referred to as the census night) as if everyone stands still while the enumerators made their count. In practice this situation is rarely obtained, if not impossible. That is, people will continuously move around and they cannot be ordered to stand or sit still while the enumerators go around counting them. Anyway the census objective is to make a quick and sweeping count to avoid double counting—or under-counting for that matter. This is the main reason why the questions are often restricted to a manageable size—i.e. not to wantonly list any question one thinks of. The whole purpose of the questionnaire design is to ensure the most needed questions are asked, in addition to the count, structure and distribution of the population.

For questions that probe or go deeper than a single answer, or beyond the “yes” or “no” response, an ideal vehicle is the survey. Surveys can last weeks or even months, and interviewers have the time to ask more complex and even “sensitive” questions. To put these in a population census will unnecessarily slow down the Census Enumeration and even the answers obtained are bound to be inaccurate given the short time spent on the questions. Besides, respondents tend to be uncooperative after answering complex or sensitive questions—this was confirmed by Enumerators when they carried out the pilot census on N Tarawa. The Enumerators reported that respondents tend to be very cooperative and fairly “open up” until they are asked the more complex and sensitive questions—after which they seem to be hesitant or reluctant to give more answers.

The first meeting on the questionnaire involving government ministries and stakeholders took place on the 27th April 2015 at the TSKL boardroom, Bairiki. Several ministries wanted information specific to their areas of interest but as in previous censuses the questions were carefully debated and scrutinized before they are accepted. The important considerations for questions to be included is that they should be:

- 1) Very important for the nation
- 2) Simple and easy to collect within a relatively short time
- 3) Not too sensitive nor too embarrassing
- 4) Cannot be obtained/collected elsewhere
- 5) Important for planning and policy formulation
- 6) Can be analyzed and interpreted
- 7) Relevant to the government and to all stakeholders, including development partners
- 8) Consistent, in terms of definition and scope

After the meeting, and after going through submissions from different ministries and other important stakeholders, a list was finally drawn up in June 2015. However the list was meant to be tested during the pilot census, and if some questions turned out to be problematic, then they can be rephrased, or simply discarded. Questions that can create friction or problems with respondents were excluded otherwise the enumeration will be slow and the results inaccurate. Ministries were advised that surveys have advantages over censuses when it comes to complex and sensitive topics because interviewers have more time with respondents in surveys, whereas the main purpose of a population census is a good count of the population.

After the questionnaire meeting and after getting comments and feedback from stakeholders, the list of questions for the 2015 population census project was prepared however SPC proposed a questionnaire which looks almost the same as in the 2010 census. The Census Advisory Committee did not accept the questionnaire straightaway because of the different questions asked in the questionnaire, and because of its layout. However after SPC insistence and lobbying to committee members and other government officials it was decided to test the SPC questionnaire. This was done on S Tarawa and in N Tarawa and the results were analyzed by SPC staff and staff of the NSO. The main finding from the results and from the discussions with interviewers is that the SPC questionnaire is too long, too complex, and asks some irrelevant questions. Because of this finding a decision was made not to use the SPC questionnaire. The census advisory committee decided on the traditional questionnaire which is more simple and straightforward. Although this has not been pilot tested, the list of questions asked and the layout are generally the same as in previous censuses therefore the pilot test was not undertaken—besides, it was getting very close to the census enumeration date. The census questionnaires are shown as annexes to this report.

5.4 Pilot census

The pilot census main objective is to test out what has been planned and prepared for the actual event, including the timing, the list of questions, and other important activities. In the case of the 2015 population census, the pilot census took place on the 22 June to 3 July 2015 and involved 27 enumerators on South Tarawa and 8 on North Tarawa. The questionnaire used is the SPC questionnaire.

But before the pilot census was carried out the census advisor had a look at the SPC questionnaire and commented that the SPC questionnaire would be very difficult to follow and could cause significant delay

during the actual census. However the census committee decided to go ahead with the SPC questionnaire but a consensus was reached that if indeed the result of the pilot census was poor and if the enumerators confirmed that the questions asked were difficult to understand or too sensitive for household members, then the SPC questionnaire would be dropped and the traditional long form questionnaire would be used. The pilot census was completed on the 3rd July 2015 and the questionnaires were coded and entered in the computers on the 6th July—and went on for three weeks. The slow pace was due to the constant power blackout and the fact that staff were new to the census work. The SPC staff were also in the country when the results came back and they had time to go through the returned questionnaires. Anyway it was very clear that several questions were simply not applicable or relevant in the Kiribati context. In fact some questions caused annoyance to household members like “*income last year*” or “*total area of land used for agricultural purposes*”, or “*value of land on which house is built*”, etc. Furthermore, because of the long time spent on the interview several household members said they need to attend first their daily chores leaving the enumerators to sit and wait in the house while they did their own work first. Some simply said that they wanted to lie down because their back was hurting. Some even mentioned that they have gone through several population censuses in the past and they know what basic questions are often asked in a census but this time so many new questions have been added and some are very difficult to answer. Even the question on literacy is difficult to answer properly because the respondent is required to demonstrate his or her literacy capacity which takes time and is quite embarrassing, if not “offending”. This is one reason why this literacy question was not asked in past censuses, except of course in the 2010 census. This is not to say that one cannot ask or tease out the literacy level of people but a better approach would be in a survey setting where one has more time to question and probe the respondent—not in a population census where time is critical and there are so many people to interview.

The enumerators reported also that they spent two hours or more interviewing one single household which means that assuming 10 hours of interviewing in a day (say 7am to 5pm) they can only interview 5 households per day. Each enumerator is given generally between 60—80 households to interview, therefore with a speed of 5 households per day, an enumerator will require at least 10 days to complete his or her enumeration area. This is too long and can cause very inaccurate results. Ideally an enumerator is required to enumerate within 3—5 days, beyond this, the high mobility of the people will render the results inaccurate and useless.

After the pilot census the Census Committee decided to use the traditional questionnaire, which is relatively simple and straightforward. There was no pilot test for this questionnaire because of time constraint but given the fact that the questionnaire has been used in many censuses it was decided to use the questionnaire without testing it.

5.5 Recruitment and training of supervisors

This is one of the most important phases in a census, at least in Kiribati with so many scattered islands. The Supervisors act much like a Census Commissioner on the island because they are the most Senior Census Staff there and the success of the census on that island depends very much on his or her conduct and supervision. Staff from the national statistics office can assist if there are problems otherwise it is really up to the census supervisor to manage and coordinate the census on the island.

The announcement for the recruitment of supervisors was made on the radio on 28 August 2015. The clerk of the island councils were requested to conduct the interview based on the requirements and criteria provided by the census office on South Tarawa.

In the first week of September 2015 the island council clerks on the outer islands started their recruitment, and starting on the 14 September, supervisors started to arrive on South Tarawa for training. They stayed on South Tarawa for about 2–3 weeks. The Census Commissioner, and members of the committee conducted the training at TeNimannaraoi maneaba Betio. The training was very critical to the success of the population census project because the supervisors were expected to go back and train the enumerators who will do the actual enumeration, and therefore the supervisors should understand fully the questions and the required answers. Not only that, but the supervisors should also understand the EA demarcation or enumeration concepts, both in theory and in practice. Therefore the training workshop was carefully planned and all the census management team and some of the committee members were present during the entire training period.

Table C. List of census supervisors and enumerators

Island	2015		2010	
	supervisors	enumerators	supervisors	enumerators
Banaba	1	2	1	0
Makin	2	7	2	7
Butaritari	2	12	2	12
Marakei	2	10	2	10
Abaiang	3	22	2	21
N Tarawa	3	20	2	21
S Tarawa	36	146	25	101
Maiana	2	8	1	9
Abemama	2	13	2	11
Kuria	1	5	1	4
Aranuka	1	5	2	5
Nonouti	2	10	2	10
N Tabiteuea	2	15	2	14
S Tabiteuea	1	7	1	5
Beru	2	10	2	12
Nikunau	2	8	1	7
Onotoa	1	8	1	7
Tamana	1	5	1	4
Arorae	1	5	1	5
Kiritimati	9	18	9	20
Tabuaeran				
Teraina				
Kanton	1	1	1	
Total	77	337	65	285

Note: Nine supervisors from Kiritimati enumerated Teraina (4) and Tabuaeran (5). And Kanton was enumerated by a meteorological staff visiting the island.

There are 77 supervisors compared to 65 in the 2010 population census. The bigger islands have two or three supervisors while the smaller ones have only one supervisor. On S Tarawa the total number of supervisors is 36.

5.6 Recruitment and training of enumerators

The total number of enumerators is 337 compared to 285 in the 2010 census. For each enumeration area there is one enumerator. And the number of enumerators depends on the population as well as on the size and geographical setup of the island.

The supervisors after their training on S Tarawa returned on the 4th October 2015 to their home islands and conducted another training for their enumerators—following what they have been taught. The enumerators were selected by island council clerks while supervisors undergone training on S Tarawa.

The recruitment of and training of enumerators on S Tarawa was organized by the census management team and census committee members. The training was held at the Tenimanraoi maneaba, Betio, and went on for a week. At the end of the training enumerators were assigned to their supervisors on a ratio of 3 (or 4) to 1.

5.7 Public awareness or publicity

As in most censuses and surveys publicity or public awareness is very important. The first public announcement of the 2015 population census was made early in 2015 when the household listing was just about to start. An announcement was made on the radio requesting people to cooperate and assist Census Staff when they visit their houses. The public awareness campaign seemed to work because Census Staff did not report any objection or complaint when they went around the houses during the first household listing exercise.

For the pilot census another series of announcements was made on the radio but unlike the household listing exercise, several households visited questioned the purpose or the reason for the questions, especially the longer and more “sensitive questions” such as the “*literacy question*”, the “*secondary activity*” question and the “*income*” question. On the household income question, several said they could not recall the income they made last year. Likewise, the household question on “*parcel of land used for agricultural purposes*” or the “*value of the land on which house is built*”, did not get much response from the households interviewed.

Radio announcements on the population census was made more frequent as the census enumeration date was getting closer. Press releases were also made in local newspapers and banners hung high on the roads.

Enumerators and supervisors were also given T-shirts with the population census design to wear during their enumeration, and repeated radio announcements made to inform the people of the impending census count.

The budget allocated to publicity is \$17,400.

6. Census enumeration on the 7th November 2015

On the morning of 7th November 2015 enumerators with their new white T-shirt uniform and backbags containing their questionnaire and guidelines manual, and other convenient stuff, started visiting households within their assigned enumeration area (EA). At the same time supervisors, on their hired motorbikes, start to move around checking their enumerators and their progress. Institutions, like boarding schools, hospitals, hotels, etc. were enumerated as well but only personal information were collected from these. Normal households were asked personal information as well as household information such as the household assets or agricultural or fisheries activities. The Police were also asked to be on standby during the census period.

The census reference point is the midnight 7th November 2015 and the rationale for this singular timing is that a person can be only at one place at a particular time. So the first question to a household head would be: "give me the names of all persons living here on the midnight 7th November 2015". If a person is asked where did he stay within a week period, or even within a day, he may give several locations because people tend to move frequently, especially in Kiribati where the extended family system is still very strong. The intention is to count all people in the country simultaneously but because transport to some islands is very infrequent, the enumeration on those islands took place weeks or even months after the designated census date --7th November 2015. These islands are Tabuaeran, Teraina, and Kanton in the Lines and Phoenix group. Another island that is difficult to enumerate is Banaba—there is no airfield on this island.

The enumeration on Kanton was made by a meteorological staff¹⁰ visiting the island. The officer was asked by the Census Commissioner to carry out the enumeration there because it was very difficult to send someone from the census office. Before he departed he was taught how to fill in the questionnaire but apparently he did not have any problem filling in the questionnaire. He returned in March 2016 with the census questionnaires. In the past the census management team either diverted a ship en-route to Christmas island to Kanton, or actually charted a small vessel to visit the island. These options are very expensive, especially the charter option.

¹⁰ The officer is in fact the husband of the Census Commissioner and was sent to Kanton from his office to carry out some work there.

7. Census in the Line islands

Carrying out a population census in the Line islands has always been a formidable task for the population management team as well as to the national statistics office because of the distance and the problem of communication. Going to Christmas island may take several days with a stop in Fiji on the way and on return. The air fare is very expensive as well as the subsistence allowance for staff going there. In the case of census staff the cost is considerable if the staff stayed there for several weeks. The poor communication (telephone and internet) also means that it is very difficult to resolve problems encountered there during the preparatory activities or during the actual census enumeration. Because of the problems mentioned the census enumeration in the Lines and Phoenix group sometimes took place well after the designated census date.

The first task is to appoint a census senior staff on Christmas island to manage and coordinate the census activities. Once this staff is appointed his first task is to recruit supervisors to help him or her to do the household listing and EA demarcation. Once this is done his next task is to recruit the census enumerators with the assistance of his supervisors. If the senior staff has no census background, staff from the census office on S Tarawa will visit Christmas island to assist him. Once everything has been set up on Christmas island, the next hurdle is to plan for the enumeration of people on Tabuaeran (Fanning island) and Teraina (Washington island). There is no regular transport to the two islands and one has to use whatever transport that is available during or after the census period. Sometimes census staff travel on a yacht (or the freighter Kuwaii) going to the islands, but getting back is another issue. The government has tried to provide some means to service the islands in the past but somehow it never succeeded—the latest effort ended in a fiasco when the money sent by the Linnix ministry to buy a vessel ended up in the wrong hands. Even the government at one time sent a plane (from Air Kiribati) there to see whether it is feasible to set up a domestic airline service but apparently the idea did not bear fruit as there was no plane there during the census period. However at the time of writing this report Air Kiribati has sent a plane there to service the islands. Not only there is a lack of transport problem but another practical difficulty is in the rough seas around the two islands—to go there one needs to be fit and able to swim—in case the boat capsizes. After the screening test in September 2015, organized by the Linnix ministry, Neeti Komeri was selected as the Deputy Census Commissioner looking after the census in the Line islands. A census team from Tarawa flew to Christmas island via Fiji in October 2015 to assist Mr Komeri in the household listing and EA demarcation. The census team comprised of Mr Reiher, Mr Komwenga, and Ms Tekaieti. The team also assisted in the training of supervisors.

The census enumeration on Christmas island took place on the 7th November 2015, the same time the census enumeration was done in the Gilberts group. However the enumeration on Tabuaeran and Teraina took place later in November when the freighter Kuwaii made a trip to the islands. Mr Komeri boarded the ship with nine supervisors and they enumerated Tabuaeran first and then Teraina. The team split, some enumerating Tabuaeran and the rest continued to Teraina to enumerate people there. After visiting Teraina the ship went back to Tabuaeran to pick up the supervisors before returning to Christmas island.

Tabuaeran (Fanning Island):

On the 29th of November 2015 the ship reached Tabuaeran and Mr Komeri assigned 5 supervisors to carry out the enumeration on the island. Mr Komeri asked the council to provide some local people to act as guides and to help in the enumeration. The council agreed and nominated 10 local guides to work with the supervisors. There were no hotels or guesthouses so supervisors stayed with relatives or friends while the ship sailed to Teraina. Mr Komeri reported that all the 10 census guides from the island were very helpful and supportive during the census enumeration.

Teraina (Washington Island):

On the 30th of November 2015 the ship arrived at Teraina. Mr Komeri asked the island council for assistance as he did on Tabuaeran. The clerk agreed to provide everything to the Census Enumerators including the transport. She organized the team members' accommodation in the guest house and then for the payments will do later after the census enumeration. The census enumeration started on the 2nd of December and completed on the 8th of December 2015. Supervisors worked with only 4 census guides from the island where the only candidates being applied.

8. Coding and Data entry

When the questionnaires started arriving back from the islands (field) the census staff first task was to make sure all the questionnaire books have been accounted for and that they have been properly filled in. When the checks have been made the next immediate task was to enter some of the information into the ACCESS database. The information entered includes the name and surname, the date of birth, the sex, island, the village, the EA and the household number. The database provides the basis of a quick count of the population, by island, and by age, etc. The first preliminary report is based on this database. Another very useful purpose of this database is that it can be used to check up the names of the people and in a way provides a quick check on the coverage of the census. For instance, after the census enumeration one minister reported that he was not enumerated during the census and his name was typed into the database and indeed his name was not on the database. The supervisor responsible was asked why the minister was not enumerated and she said that the minister was never in his house during the enumeration days. He was apparently moving frequently between his house and his island constituency. Anyway he was subsequently enumerated and his name is now on the database. The Census Supervisors entered the information into the database but some were not very good with computers and it took quite a while to complete their books. Dr Rouatu set up the ACCESS database for the census information but the actual data entry was supervised by the census management team. After the questionnaire information have been entered into the database, the questionnaires were given to the census coders to code the responses or answers. The database was also used to check the double entries and missing values, like the date of births.

Coding in a population census context is putting a string of numbers of characters (or code) alongside a written answer (usually a text or alphanumeric character) on the completed census questionnaires—this can be done during the census enumeration (or field coding) or after the census questionnaires are returned from the field (in-house coding). The numbers are more compact and do not take up much memory space, i.e. computer programs handle numbers or codes faster than long alphanumeric characters.

SPC questionnaire is pre-coded but the Census Committee favoured the answers to be written out in full and the coding to be undertaken in the office, but there are advantages or disadvantages of either approach. In the 2015 census the pre-coding approach was not used because the Committee Members reckoned that if a code is used in the field it is hard to tell whether the code or number is right or wrong. However if the response is written out, say Makin or Nonouti, then this is more informative than the code “2” or “13”. That is, to write down just a number, staff in the office cannot verify whether the code written is correct or not however if the enumerator writes out in full, say Makin, then it can only be Makin. But as mentioned above there are advantages or disadvantages of either approach and the disadvantage here is the time—i.e. writing out “Makin” in full is slower than writing the code “2”, or ticking or circling “2” in a pre-coded questionnaire. However for the 2015 census project, enumerators have been trained to use abbreviations or shortcuts as well, for instance, instead of writing out Makin—“Mak” can be used or “Non” for Nonouti. The abbreviations are obviously shorter than the full name and they are still more informative than the code “2” or “13”. Pre-coding also requires that the enumerator knows exactly what code to put in during the enumeration phase otherwise he or she has to constantly refer to the list of codes which could delay the enumeration considerably. The main strategy in a census enumeration is to have a very quick but accurate count of all the people in Kiribati.

The coders were given coding manuals and taught how to use the manual. As it turned out the most difficult areas to code is the industry and occupation answers. The census management team assisted the

coders initially but after a week or two the coders became more proficient and continued their work with minimal supervision. The coding for the 2016 census results was completed in early March 2016 and the data entry started straightaway after that—by the same people.

Data entry is the next step after coding and the program used is CSPRO. This program can do data entry as well as tabulations. It is free and can be downloaded from the internet.

Ms Agnether Lemuelu was appointed to supervise the data entry work on the 11 January 2016. She was assisted initially by two staff who were recruited also on the 11 January the same year. The census committee also approved the recruitment of 28 computer operators in February 2016—for four months. The computer operators coded the questionnaires first before they enter them in computers. The same coders were asked to enter the coded data because they are more familiar with the codes.

Data entry is one of the critical phases of the population census project because the resulting data file is the main source of the census information and therefore the census management team took elaborate procedures to ensure the resulting data file is as “clean” as practically possible. One of the procedures they devised is to export the CSPRO data file to the ACCESS database from which they could detect and correct wrong entries. The team made several cross tabulations to see whether the resulting table make sense or not. For instance, they crosstab the age against qualifications and if they see very odd results, such as children having Masters degrees, then they returned to the questionnaires and check what is the right qualification or right age. As a matter of fact there are edits made in the data entry module to avoid errors but as in real life people still make mistakes and that is why it is always prudent to have other editing procedures including manual checking.

The data entry phase was completed in early June 2016 and all computer operators were laid off in July the same year. An informal farewell picnic was organized by the census management team with the full cooperation of the data entry operators on the weekend following the completion of the work.

9. Tabulations

This is one of the key phases of a population census and is very important because the information required usually comes from cross tabulations of the variables in the census data file produced from the data entry exercise. Some tabulations are simple and very basic (e.g. population by age, population by sex, population by religion, population by island, etc.) while some need more complex settings (e.g. identifying female-headed households with no toilets, or households with disabled persons aged 15 years and over having no rainwater, etc.). The tabulation package is CSPRO, and staff within the National Statistics Office (NSO) know how to use this package to produce the tables.

The tables presented in this report are very similar to the tables that have been produced and shown in past census reports. These tables are national in scope but tables for the islands can be produced if people request them. As a matter of fact many different tables can be produced from the census data file, in addition to what are shown here, but the users should ask the National Statistics Office what they want.

During the census two types of questionnaire were used—one for personal information and the other for household information. The following tables follow these two types, i.e. the first list of tables pertain to personal information like age, sex, education, occupation, etc. while the second set include household assets, utilities, production, etc.

Annexes

A1. The 2015 Population Census Questionnaire

	Person 1	Person 2	Person 3	Person 4	Person 5	Person 6	Person 7
PERSONAL INFORMATION							
1 Name	Tom						
2 Father name	Joe						
3 Relationship to Head	Head						
4 Sex	M(1) F(2)						
5 Date of birth (DOB)	dd/mm/yy						
6 Marital status							
7 Religion							
RESIDENCY STATUS: e.g. Mak, STab, Abe, Aust, Fiji, etc							
8 Usual residence							
9 Ethnic origin							
10 Home island	Mak	Abe					
11 Birth Place							
12 Residence last census							
EDUCATION (All persons 3 years and over, or DOB before 7-Nov-2012)							
13 Ever attended school?	Yes(1) No(2)						
14 Highest level of school							
15 Attending school this yr?	Yes(1) No(2)						
16 if yes, What level?							
17 Attended school last yr?	Yes(1) No(2)						
18 if yes, What level?							
19 Can person read/write in English?	Yes(1) No(2)						

	Person 1	Person 2	Person 3	Person 4	Person 5	Person 6	Person 7
20 Do you use internet?	Yes(1) No(2)						
21 if yes, Internet Place?							
HEALTH (Persons 15 years and over OR DOB before 7-Nov-2000): e.g. <i>Never (N), Sometimes (S), Regular (R), Heavy (H), No Longer (NL)</i>							
22 Does person smoke?							
23 Drink alcohol?							
24 Drink kava?							
DISABILITY (All Persons): <i>No, moderate, severe, cannot</i>							
25 Difficulty in seeing?							
26 Difficulty in hearing?							
27 Difficulty in walking?							
28 Difficulty in remembering?							
29 Difficulty communicating?							
30 Difficulty in dressing?							
HUMAN RIGHTS (6 years and over or DOB before 7-Nov-2009): <i>Circle your answer</i>							
31 Ever heard of "Te Rau N Te Mwenga" Act	Yes(1) No(2)						
32 Ever heard of "Human Rights"?	Yes(1) No(2)						
SPORT (Persons 15 years and over OR DOB before 7-Nov-2000): <i>Write one main sport or reason why not play</i>							
33 Do you play sport?	Yes(1) No(2)						
34 If yes, main sport played							
35 If not, why?							
LABOUR FORCE (Persons 15 years and over OR DOB before 7-Nov-2000): <i>e.g. Employee, Self-employed, Employer, Subsistence, Not employed</i>							
36 Employment status							
37 Main Occupation							
38 Industry (Employer)							
39 Any other occupation?							

	Person 1	Person 2	Person 3	Person 4	Person 5	Person 6	Person 7
40 If Not Employed, Are You Actively looking for a job?	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)
41 If no, why not?							
42 If Not Employed, Are you available to work?	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)
43 Main Role in the hh							
BIOLOGICAL PARENTS							
44 Biological mother alive?	Yes(1) No(2)	Yes (1) No (2)	Yes(1) No(2)				
45 If mother in hh, write PN.							
46 Is biological father alive?	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)
FERTILITY (Only FEMALES 15 years and Over OR DOB before 7-Nov-2000): Aia Kakariki aine							
47 Have given birth to a live child ?	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)
48 Age at first birth/date of the first born							
49 How many children given birth to?							
50 How many children still alive and live in this hh?							
51 How many live elsewhere?							
52 How many no longer alive?							
53 When was last child born?							
54 Sex of last child	M(1) F(2)	M(1) F(2)	M(1) F(2)	M(1) F(2)	M(1) F(2)	M(1) F(2)	M(1) F(2)
55 Is last child still alive?	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)	Yes(1) No(2)
56 When did last child died?							

HOUSE CHARACTERISTICS		
1 Which best describes the main house?	Permanent house (1), Local house (2), Mix (3), Temporary (4), Other (9)	
2 House ownership?	Kiribati Housing Corporation (1), Linnix House (2), Own house (3), Relatives (4) , Friends (5), Rent (6) , Other (9)	
3 Land on which house built?	Own land (1), Government lease (2), Private lease (3), Informal arrangement (4), Crown Land (5) ,Other (9).	
4 Main source of drinking water	PUB (1), Pipe system (2), Well (3), Rainwater (4), Other (9)	
5 Main source for washing, etc.	PUB (1), Pipe system (2), Well (3), Rainwater (4), Other (9)	
6 Type of toilet used	PUB flush toilet (1), Other Flush toilet (2), "Water latrine" (3), Kamkamka (4), Beach (5), Bush (6), Sea (7), Other (9).	
7 Sharing of toilet	Yes (1) No (2)	
HOUSEHOLD ASSETS		
8 In this household, how many cars?		
9 ,, motorbikes?		
10 ,, bicycles?		
11 ,, radios?		
12 ,, videos?		
13 ,, mobile phones?		
14 ,, land line phones?		
15 ,, refrigerators?		
16 ,, deep freezers?		
17 ,, electric/gas stoves?		
18 ,, kerosene stoves?		
19 ,, computers?		
20 ,, internet connections?		
21 ,, washing machines?		
22 ,, sewing machines?		
23 ,, solar equipment?		
24 ,, electrical generators?		
25 ,, water tanks?		
26 Main type of fuel for cooking	Gas (1), Electricity (2), Kerosene (3), Firewood (4), Copra mill waste (5), Coconut husks (6), Other (9)	
27 Main source of lighting	PUB(1), Linnix power (2), Kerosene (3), Generator (4), Solar (5), Battery (6), Other (9)	
28 Main form of solid waste disposal	Roadside point (1), Ground pit (2), Community pit (3), Burning (4), Beach (5), Sea (6), Other (9)	
AGRICULTURE		
29 How many local pigs?		
30 How many cross breed pigs?		
31 How many local chickens?		
32 How many cross breed chickens?		
33 How many ducks?		

34 Does hh grow/have coconut trees?	Yes (1)	No (2)
35 „ breadfruit trees?	Yes (1)	No (2)
36 „ babai?	Yes (1)	No (2)
37 „ pandanus?	Yes (1)	No (2)
38 „ banana?	Yes (1)	No (2)
39 „ pumpkins?	Yes (1)	No (2)
40 „ kumara?	Yes (1)	No (2)
41 „ cassava?	Yes (1)	No (2)
42 „ cabbage?	Yes (1)	No (2)
43 „ tomato?	Yes (1)	No (2)
44 „ cucumber?	Yes (1)	No (2)
45 „ water melon?	Yes (1)	No (2)
46 Does this hh have a vegetable garden?	Yes (1)	No (2)
47 Does HH cut toddy?	Yes (1)	No (2)
48 If yes, how many toddy trees?		

FISHING

49 Any member regularly go fishing?	Yes (1)	No (2)
50 Main purpose of fishing?	Sale (1), Home consumption (2), Both (3), Other (9)	
51 What type of fishing method	Trolling (1), Line-fishing (2), Net scooping (3), Net fishing (4), Collecting (5), Spearing (6), Other (9)	
52 Location of fishing	Lagoon (1), lagoon flat (2), Ocean (3), Reef flat (4), Outer-reef (5), Other (9)	
53 How many wooden fishing boats?		
54 How many aluminium fishing boats?		
55 How many fibre glass boats?		
56 How many canoes?		
57 How many double canoes?		
58 How many Other fishing boats?		
59 Receive cash (last month) <u>mainly by</u>?	Salary (1), wage (2), remittance (3), fish sale (4), agriculture sale (5), handicrafts (6), Other (9)	

MIGRATION

60 Has any member from this hh migrated overseas within the last 3 yrs?	Yes(1)	No(2)
61 If yes, how many?		
62 When was the last migration?		Give the year
63 For what reason?	PAC (1), Marriage (2), Returning home(3), Other (9)

HOUSEHOLD ROSTER: ALL INDIVIDUALS AND DEMOGRAPHIC INFORMATION, ORIGINS

Please give me the name of each person who was sleeping here at 12.01 AM (Saturday, Nov 07, 2015), including any persons staying here who have no other home. Also list any person who usually resides here, but was visiting another country, another island and another house, or on Census night. Begin with head or acting head. Please include babies, children, old people and visitors.

Household Member (HM)

The head or acting head is the member who owned the home, bought the home, or rented it. If there is no such person, start with any adult member.

LINE NO.	USUAL RESIDENTS AND VISITORS	RELATIONSHIP TO HOUSEHOLD HEAD	SEX	AGE	DATE OF BIRTH
1	PERSON NAME - Usual residents (roommates, boarders, etc) - Persons temporarily in another country/business trip, holiday, Research - People who stay here most of the week while working even if they live elsewhere	01 Head/acting head 02 Head/acting wife/father 03 Child 04 Child (in-law) 05 Foster child 06 Adopted child 07 Parent 08 Brother/Sister 09 Other Relative 10 Stepcld 11 Adopted/Foster child 12 Roomer/Boarder 13 Housemate/Roommate 14 Other nonrelative 98. Don't know Write the appropriate code in the box	1 = Male 2 = Female	What is ... 's age? (in completed year)? Enter 000 for child under 1 year	What is ... 's date of birth? mm/ddyy
2	TO EXCLUDE - Persons away from home - College students living elsewhere - High school students in boarding schools (living in dormitories)
